USPTO Class 273 - Amusement devices: games

20090283967 - Amusement or gaming apparatus

Amusement or gaming apparatus comprises coin operated apparatus adapted for playing of a roulette game which is enhanced by a bonus game. The apparatus comprises an actual or a simulated roulette wheel (2) with a circular track (3, 4) and a matrix (32) of numbered squares comprising an array (32) to one lateral side of the wheel. The matrix (32) is interactive, by means of a cursor and mouse, or by embodiment as a touch screen, for selecting numbers and placing bets. The track (3, 4) includes in addition to the usual numbered spaces and a zero, two unnumbered and preferably distinctively coloured spaces (12) which enable access to a bonus game if a first ball lands on one of these spaces. The bonus game preferably makes use of a distinctively coloured ball....

20090283968 - Roulette game apparatus and method

A method for arranging indicia on a game surface and on an associated roulette wheel. Indicia indicating numbers from 1 through 36 are arranged on the game surface in ascending order with half of the numbers associated with a first color and half associated with a second color. The numbers are arranged in three groups of twelve, each group having three even numbers and three odd numbers associated with each of the two colors. Indicia indicating each of the numbers are arranged on a roulette wheel such that no two adjacent numbers on the roulette wheel are associated with a same color, are disposed in a same group, are disposed in a same column, are disposed in a same row, or are disposed adjacent one another on the game surface and such that each pair of numbers disposed substantially diametrically across from one another on the roulette wheel is disposed in a same group and column on the game surface....

20090283969 - Automatic poker shuffling machine

An automatic poker shuffling machine includes a frame having a first container, a second container and a card chamber between the first container and the second container, an elevating device has a table in the card chamber, a card cutting device for sending the cards on the table to the first and second containers alternately, and a card shuffling device having first and second turning wheels on the bottoms of the first and the second containers to stack the cards alternately on the table again. The present invention further includes a plurality of sensors to sense the cards and control the corresponding elements action, and a collecting box to receive the shuffled cards....

20090283970 - Board game of baseball

The present invention provides a truly entertaining user friendly board game of baseball, which captures the essential fundamentals and rules of baseball, easy to follow, with a simple structural configuration, and few structural elements. Since the board game of baseball of the present invention, does not demand intense concentration, it can be played leaving room for the players to engage in other aspects of an entertaining and friendly interaction....

20090283971 - Method and system for integrating a lottery game with a deck of cards

A system and methodology for combining a lottery game with playing cards provides a plurality of decks of playing cards to purchasers. Each deck includes a set of a defined number and type of cards to play any manner of card game separate from the lottery game. At least one of the cards within each deck includes a lottery game play area that provides the purchaser of the deck with a chance to win a prize in a first lottery game....
